Gentlemen:

There were 101,627.3 tons of shale mined from this property during 1985. There were about 10 acres of new ground stripped following our existing mining plan. Natural revegetation has continued to reclaim most of the existing dumps.

The material that was mined came from the existing pits and about 3,000 tons were moved to the dump areas. There has been a small amount of sliding from the dump areas but no appreciable erosion of the mine area in the last year.

If there are any other questions please feel free to call.

Respectfully,

Carsten N. Mortensen
